About Risk Management

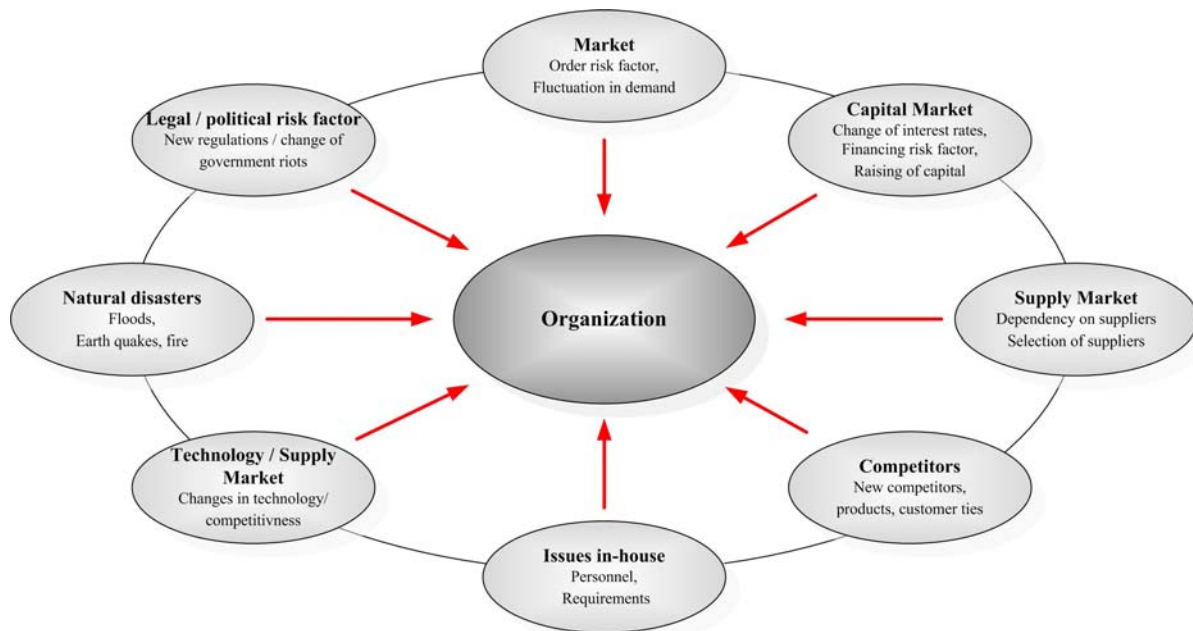

Risk Management is the systematic identification, evaluation and control of various risks. This systematic Risk Management process can be implemented in different areas for example enterprises, credit and financial matters, environmental- and technical issues as well as for individuals.

Each enterprise is responsible for their own risk. The organization will decide based on effective aspects and factors how the risks have to be handled.

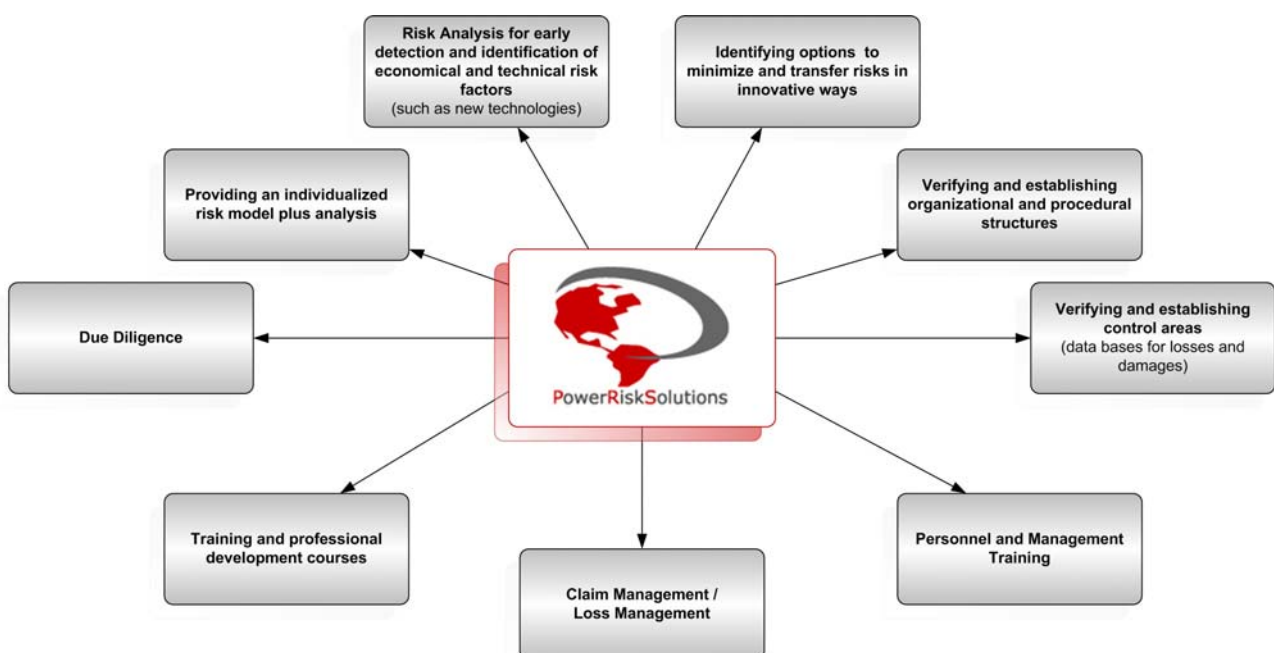

Power Risk Solutions AG will consult you professional during all stages of your Risk Management Process.

Risk field of an organization

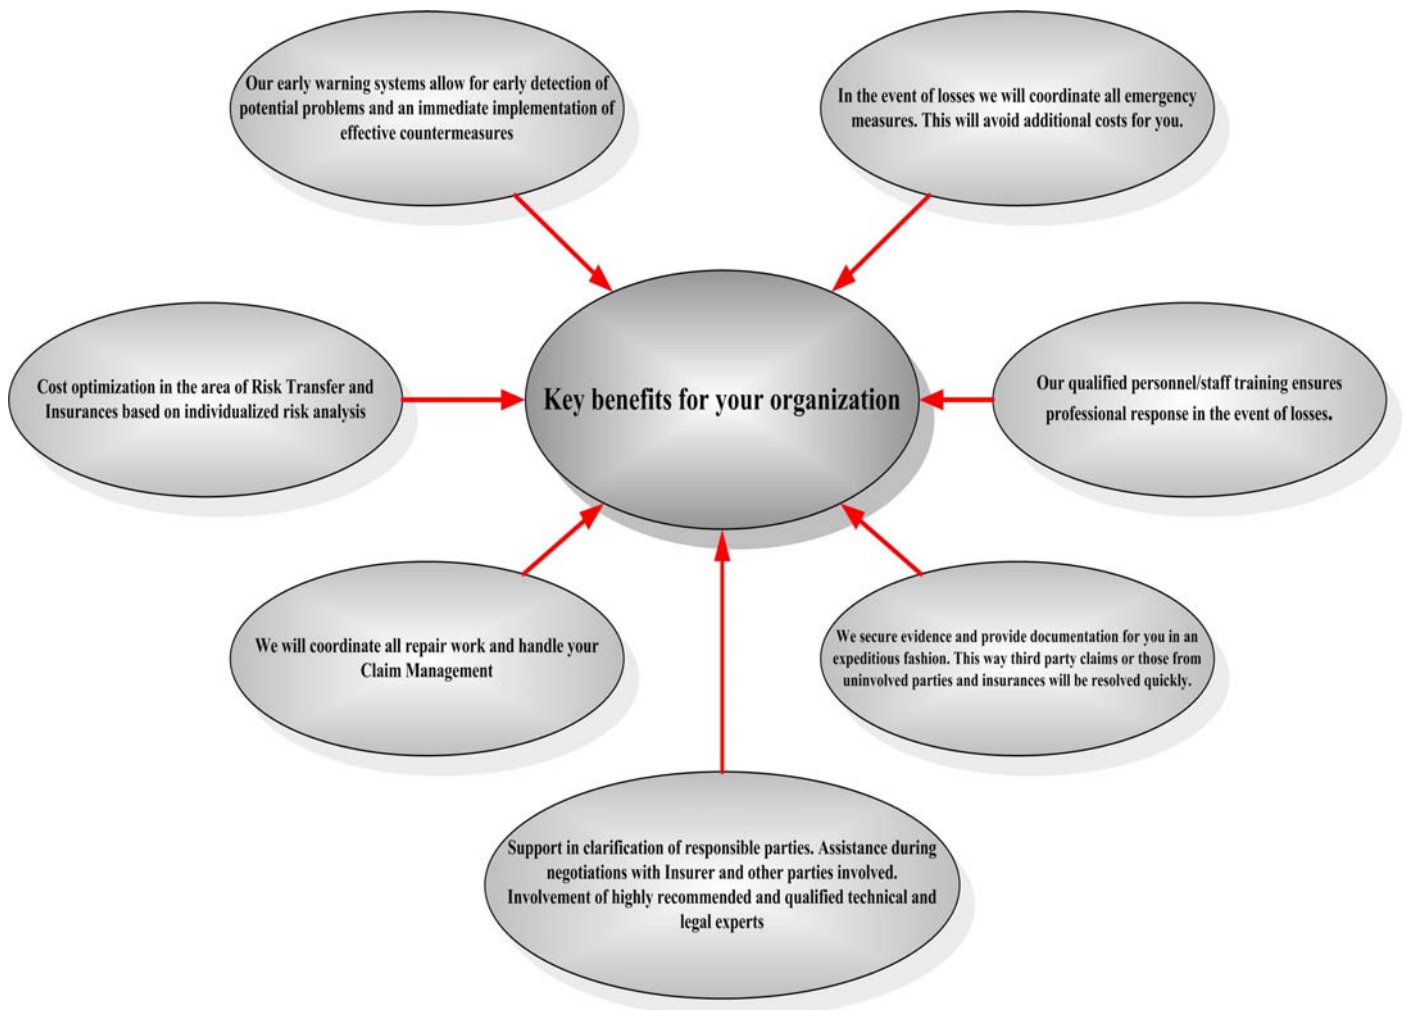

Every day, modern and innovative businesses are faced with the challenge of penetrating new markets with innovative products and advanced technologies. However, they are also continuously faced with the question of how new **opportunities** can be effectively balanced against what at times may be great **risks**.
